

**Software Engineering**  
**BIT355CO**

**Year III**

**Semester II**

Teaching Schedule Hours/Week			Examination Scheme				
Theory	Tutorial	Practical	Internal Assessment		Final		Total
3	1	-	Theory	Practical	Theory	Practical	100
			20	-	80	-	

**Course Objectives:**

This course is intended to provide an introduction to SE concepts and practices focusing on industrial software development characteristics and processes, development models, and the software life cycle for mid-scale system.

- Provide students a comprehensive introduction to software engineering.
- provide the students the kinds of activities that are necessary for developing a software system
- Study the important phases of software development

**Course Contents:**

**Unit 1:Introduction to Software Engineering: [4 Hrs]**

- 1.1 Definition of software engineering
- 1.2 The evolving role of software
- 1.3 Changing nature of software
- 1.4 Characteristics of software
- 1.5 A generic view of software engineering
- 1.6 Software engineering-layered technology

**Unit 2:Process Models [5 Hrs]**

- 2.1 The Waterfall model
- 2.2 Prototyping model
- 2.3 RAD model
- 2.4 Spiral model
- 2.5 Agile Software Model.

*Ramya*

*Amma / Farah*

*Jay*

**Unit 3: Software Project Management [8 Hrs]**

- 3.1 Meaning of 4Ps in software project management
- 3.2 Activities of project planning
- 3.3 Project estimation techniques
- 3.4 COCOMO model
- 3.5 Risk Management
- 3.6 Project Scheduling
- 3.7 Staffing
- 3.8 Software Configuration Management (SCM)

**Unit 4: Software Requirements and Specification [7 Hrs]**

- 4.1 Functional and non-functional requirements, requirements engineering process (feasibility studies, requirements elicitation and analysis, requirements validation, requirements management)
- 4.2 Data Modeling and flow diagram
- 4.3 Software prototyping techniques
- 4.4 Requirement definition and specifications

**Unit 5: Software Design [7 Hrs]**

- 5.1 Introduction to software design
- 5.2 Characteristics of a good software design
- 5.3 Design principle
- 5.4 Design concepts
- 5.5 Design strategy
- 5.6 Design process and design quality
- 5.7 Software architecture and its types

**Unit 6: Software Testing [7 Hrs]**

- 6.1 Software testing process
- 6.2 Principle of testing
- 6.3 Test case design
- 6.4 Black-box testing (Boundary-value analysis, Equivalence class partitioning)
- 6.5 White-box testing (Statement coverage, Path coverage, Cyclomatic complexity)
- 6.6 Software verification and validation

**Unit 7: Metrics for Process and Products [4 Hrs]**

- 7.1 Software measurement
- 7.2 Metrics for software quality
- 7.3 Software quality assurance
- 7.4 Software reliability
- 7.5 The ISO 9000 quality standards

**Unit 8: Software Engineering Trends and Technology [3 Hrs]**

- 8.1 Agile development

*Rathore* *Guru* *Ravat* *Jain*

- 8.2 Extreme programming
- 8.3 Cloud computing and grid computing
- 8.4 Enterprise mobility
- 8.5 Business intelligent and approaches
  - 8.5.1 ERP, Supply chain management, Service-oriented architecture and web services
  - 8.5.2 Enterprise portals and Content management
- 8.6 Introduction to OOSE

**Case Study:** Students are encouraged to perform the case study to implement concepts of above-mentioned topics.

**Data Warehousing and Mining  
BIT353CO**

**Year:IV**

**Semester:II**

Teaching Schedule			Examination Scheme				
Hours/Week			Internal		Final		Total
Theory	Tutorial	Practical	Theory	Practical	Theory	Practical	150
3	1	2	20	50	80	-	

**Course Objectives:**

This course aims at introducing advance aspects of data warehousing and data mining, encompassing the principles, research results and commercial application of the current technologies. It also provides knowledge to introduce students to the basic concepts and techniques of data mining, using recent data mining software for solving practical problems.

**Course Contents:**

**Unit 1**

[4 Hrs]

Introduction to data mining: Motivation, importance, definition of data mining, kinds of data mining, kinds of patterns, data mining technologies, kinds of applications targeted, major issues in data mining; Introduction to Data warehousing: Importance, uses and applications

**Unit 2**

[9 Hrs]

Data Warehouse and OLAP Technology, Data Warehouse Architecture, Steps for the Design and Construction of Data Warehouses, A Three-Tier Data Warehouse Architecture, OLAP, OLAP queries, metadata repository, Data Preprocessing – Data Integration and Transformation, Data Reduction, Data Mining Primitives: What Defines a Data Mining Task? Task-Relevant Data, The Kind of Knowledge to be Mined, KDD.

**Unit 3**

[9 Hrs]

Mining Association Rules in Large Databases, Association Rule Mining, Market Basket Analysis: Mining A Road Map, The Apriori Algorithm: Finding Frequent Itemsets Using Candidate Generation, Generating Association Rules from Frequent Itemsets, Improving the Efficiency of Apriori, Mining Frequent Itemsets without Candidate Generation, Multilevel Association Rules,

*Rathna*

*Aswini*

*Ranjith*

## Approaches to Mining Multilevel Association Rules Mining

### Unit 4

[6 Hrs]

Multidimensional Association Rules for Relational Database and Data Warehouses, Multidimensional Association Rules, Mining Quantitative Association Rules, Mining Distance-Based Association Rules, From Association Mining to Correlation Analysis

### Unit 5

[9 Hrs]

What is Classification? What Is Prediction? Issues Regarding Classification and Prediction, Classification by Decision Tree Induction, Bayesian Classification, Bayes Theorem, Naïve Bayesian Classification, Classification by Backpropagation, A Multilayer Feed-Forward Neural Network, defining a Network Topology, Classification Based of Concepts from Association Rule Mining, Other Classification Methods, k-Nearest Neighbor Classifiers, Genetic Algorithms, Rough Set Approach, Fuzzy Set approaches.

### Unit 6

[ 8Hrs]

What Is Cluster Analysis? Types of Data in Cluster Analysis, A Categorization of Major Clustering Methods, Classical Partitioning Methods: k-Meansand k-Medoids, Partitioning Methods in Large Databases: From k-Medoids to CLARANS, Hierarchical Methods.

### Laboratory works:

The student must do the project work using data mining and data warehousing concept. Topics should be given by the course instructor and at the end of the semester student should present their project work.

**Artificial Intelligence**  
**BIT351CO**

**Year III**

**Semester: II**

Teaching Schedule Hours/Week			Examination Scheme				
Theory	Tutorial	Practical	Internal Assessment		Final		Total
3	1	2	Theory	Practical*	Theory**	Practical	
			20	50	80	-	150

**Course Objectives:**

- To provide basic knowledge of Artificial Intelligence
- To proved the knowledge of Machine Learning, Natural Language, Expert Systems and Neural Network
- To develop entrepreneurship skills and leadership in practical fields

**Course Contents:**

**Unit 1: Introduction [2 Hrs]**

- 1.1 Definitions
- 1.2 Goals of AI
- 1.3 Challenges of AI
- 1.4 AI approaches
- 1.5 AI techniques
- 1.6 Applications of AI

**Unit2 2: Agents [5 Hrs]**

- 2.1 Introduction to agents
- 2.2 Agent's performance
- 2.3 Example of Agents
- 2.4 Rationality and omniscience
- 2.5 Types of agent environment
- 2.6 Agent architecture

Rathaur

Qureshi

Bawer

Dwip

2.7 PEAS (vacuum cleaner agent, human agent, robotic agent, taxi driving agent, 8-queen problem etc)

2.8 Types of agent (simple reflex, goal based, model based, utility agent, learning agent)

### Unit 3: Problem solving using searching

[8 Hrs]

#### 3.1 Uninformed Search

- 3.1.1 Problem solving agents
- 3.1.2 Problem types
- 3.1.3 Problem formulation
- 3.1.4 Example problems
- 3.1.5 Basic search algorithms (BFS, DFS, Depth limited search, uniform cost search, iterative deepening, bidirectional search)
- 3.1.6 Comparative study of all uninformed search strategies (completeness, optimality, time complexity and space complexity)

#### 3.2 Informed Search

- 3.2.1 Best first (greedy) search
- 3.2.2 A\* Search
- 3.2.3 Heuristic function
- 3.2.4 Hill Climbing and problems
- 3.2.5 Comparative Study of each type of searching
- 3.2.6 Simulated annealing
- 3.2.7 Genetic Algorithm

### Unit 4: Adversarial Search and Constraint satisfaction problem

[5 Hrs]

- 4.1 Games
- 4.2 Perfect games
- 4.3 Game tree and formal definition
- 4.4 Min Max problem
- 4.5 Alpha beta pruning algorithm
- 4.6 CSP Problem and examples
- 4.7 Crypto arithmetic problems and solutions

process as  
binding soln  
from a set as  
variable  $v_i$  and  
a set of constraints  $(c_i)$

### Unit 5: Knowledge Representations

[8 Hrs]

- 5.1 Knowledge and its types
- 5.2 Logic
- 5.3 Semantic Nets
- 5.4 Propositional logic vs FOPL
- 5.5 Resolution in FOPL
- 5.6 Frames

QUESTION

ANSWER

ANSWER

*Memorization, reading and understanding*

**Unit 6: Learning System** [4 Hrs]

- 6.1 Rote learning
- 6.2 Learning from example: inductive learning methods
- 6.3 Decision trees
- 6.4 Explanation based learning + *learning by analogy*
- 6.5 Reinforcement learning

**Unit 7: Reasoning** [4 Hrs]

- 7.1 Monotonic Reasoning ✓
- 7.2 Statistical Reasoning (Bayesian Network) ✓
- 7.3 Uncertainty in reasoning ✓
- 7.4 Case based reasoning

**Unit 8: Expert System** [4 Hrs]

- 8.1 Human Expert vs expert system ✓
- 8.2 Expert System Structure ✓
- 8.3 Expert system example
- 8.4 Characteristics of expert system ✓
- 8.5 Knowledge acquisition ✓
- 8.6 Knowledge base ✓
- 8.7 Inference engine
- 8.8 Forward chaining and backward chaining
- 8.9 Design of expert system

**Unit 9: Artificial Neural Networks** [3 hrs]

- 9.1 Research history
- 9.2 Model of artificial neuron
- 9.3 Neural networks architectures
- 9.4 Learning methods in neural networks
- 9.5 Perceptron Network, Multi-layered feed forward network, Hopfield networks
- 9.6 Application of neural networks

**Unit 10: Natural language processing** [2 Hrs]

- 10.1 Introduction
- 10.2 Components of natural language processing
- 10.3 Natural language understanding
- 10.4 Natural language generation
- 10.5 Steps in Natural language processing.

**Course Objectives:**

The objectives of this course are to introduce students to simulation and Modeling techniques and to provide opportunities to develop basic simulation and modeling skills with respect to carrying out projects using any simulation method on the computer.

- |   |                  |
|---|------------------|
| <b>1. Concepts of Simulation</b>                  | <b>[6 Hrs]</b>   |
| 1.1. Introduction                                 |                  |
| 1.2. The system                                   |                  |
| 1.3. Continuous and discrete systems              |                  |
| 1.4. System simulation                            |                  |
| 1.5. Real time simulation                         |                  |
| 1.6. When to use Simulation                       |                  |
| 1.7. Types of Simulation Models                   |                  |
| 1.8. Steps in simulation Study                    |                  |
| 1.9. <i>Phases of a simulation study</i>          |                  |
| 1.10. Advantages of simulation                    |                  |
| 1.11. Limitations of the Simulation Technique     |                  |
| 1.12. Areas of applications                       |                  |
| <b>2. Monte Carlo-Method</b>                      | <b>[ 4 Hrs]</b>  |
| 2.1. Monte Carlo Method                           |                  |
| 2.2. Normally distributed random number           |                  |
| 2.3. Monte Carlo Method V/S Stochastic Simulation |                  |
| <b>3. Simulation of Continuous Systems</b>        | <b>[5 hours]</b> |

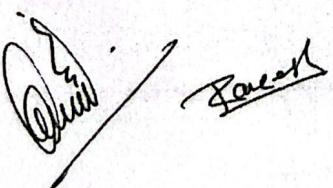

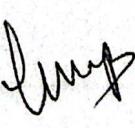

- 3.1. Manual Simulation  
3.2. A pure Pursuit Problem  
3.3. Queuing system  
3.4. Markov chains  
3.5. Differential and partial differential equations
4. Random Numbers [10 hours]  
4.1. Random Numbers  
4.2. Random Number Tables  
4.3. Pseudo Random Numbers  
4.4. Generation of Random Numbers  
4.5. Mid square Random Number generator  
4.6. Qualities of an efficient Random Number Generator  
4.7. Testing Numbers for Randomness  
4.8. Uniformity Test  
4.9. Chi-square test  
4.10. Testing for auto correlation  
4.11. Poker Test
5. Analysis of simulation output [10 hours]  
5.1. Estimation methods  
5.2. Simulation run statistics  
5.3. Replication of runs.  
5.4. Elimination of internal bias
6. Simulation languages [10 hours]  
6.1. Basic concept of Simulation tool  
6.2. Discrete systems modeling and simulation  
6.3. Continuous systems modeling and simulation  
6.4. Structural, data and control statements, hybrid simulation  
6.5. Feedback systems: typical applications

#### Laboratory works:

There shall be laboratory exercises using any simulation and modeling packages. At the end of this course students must do a project on simulation.

**Course Objective:**

The course aims at providing students with the knowledge of different types of Computer information systems and primarily focuses on how to use computer information systems and information technologies to revitalize business processes, improve managerial decision making, and help organizations gain a competitive edge in business.

**Course Contents:**

**Unit 1: Information systems in Global business today [6 Hrs]**  
Definition of Information system, Definition of Management Information System, Role of Information systems in business today, Globalization Challenges and opportunities, Strategic business objectives of Information systems, Business perspective of information system.

**Unit 2: Global E-Business and Collaboration [6Hrs]**  
Business processes and Information Systems, Types of Information Systems, Systems for linking the enterprise systems for collaboration and team work. The information systems function in business.

**Unit 3: Information Systems Organization and Strategy [6 Hrs]**  
Organizations and Information systems, Impacts of information systems on organizations and business firms, Using information systems to achieve competitive advantage, Business value chain model.

**Unit 4: Information Technology Infrastructure [5 Hrs]**  
IT infrastructure, Infrastructure components, Contemporary hardware platform trends, Contemporary software platform trends.

<b>Unit 5: Foundation of Business Intelligence</b>	[2 hrs]
Using databases to improve business performance and decision making, Case study.	
<b>Unit 6: Decision Support system and Executive Information System</b>	[4 hrs]
Definition of Decision Support Systems, Components of DSS, Applications of DSS, Functions of DSS, Definition of EIS, Characteristics of EIS	
<b>Unit 7: Business Information Systems</b>	[3 Hrs]
Functional Information Systems, Marketing Information Systems, Manufacturing Information Systems, Finance and Accounting Information Systems, Quality information system.	
<b>Unit 8: Security of Information Systems</b>	[2 Hrs]
System vulnerability and abuse, Technologies and tools for protecting information resources.	
<b>Unit 9: Achieving Operational Excellence and customer intimacy</b>	[4 Hrs]
Enterprise Systems, Supply Chain Management Systems, Customer relationship management systems, Enterprise applications.	
<b>Unit 10: Strategic Information Systems</b>	[2 Hrs]
Definition of Strategic Information System, Strategic Information System Plan, Strategy for developing Strategic information system.	
<b>Unit 11. Case Studies related to Unit 3, Unit 5, Unit 9, and Unit 10.</b>	[5Hrs]
